

KYB's support tool for technicians

KYB products now have a QR code next to a spanner icon on the label of some part numbers. Technicians can download a free QR reader app onto their smart phone and can use this to scan the KYB QR code. The code will take them to information which is specific to that part number. They will then be presented with 3 or 4 choices (depending on the application). Whenever a QR code appears next to a spanner icon, it will have some technical / fitting Information attached.

- ① Fitting video
- ② Fitting instructions
- ③ Common information
- ④ Visual inspection
