

SIM - New wheel alignment from Bosch.

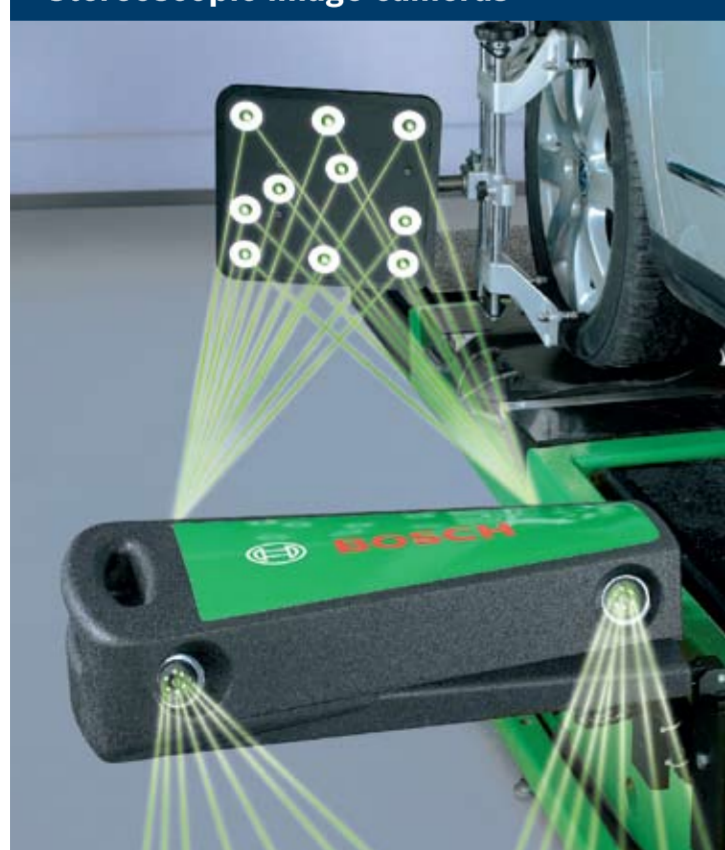

Accurate, Fast and Easy to Use

BOSCH
Invented for life

Stereoscopic image cameras

SIM - Stereoscopic Image Measurement

2 cameras aimed at one single board give us the full measurement of the wheel axle position.

Fast Image Capture

Taking up to 29 pictures per second with closer distance to the measured target, provides clear image capture and any movement is detected. Runout compensation can be done whilst driving the vehicle for- and backward.

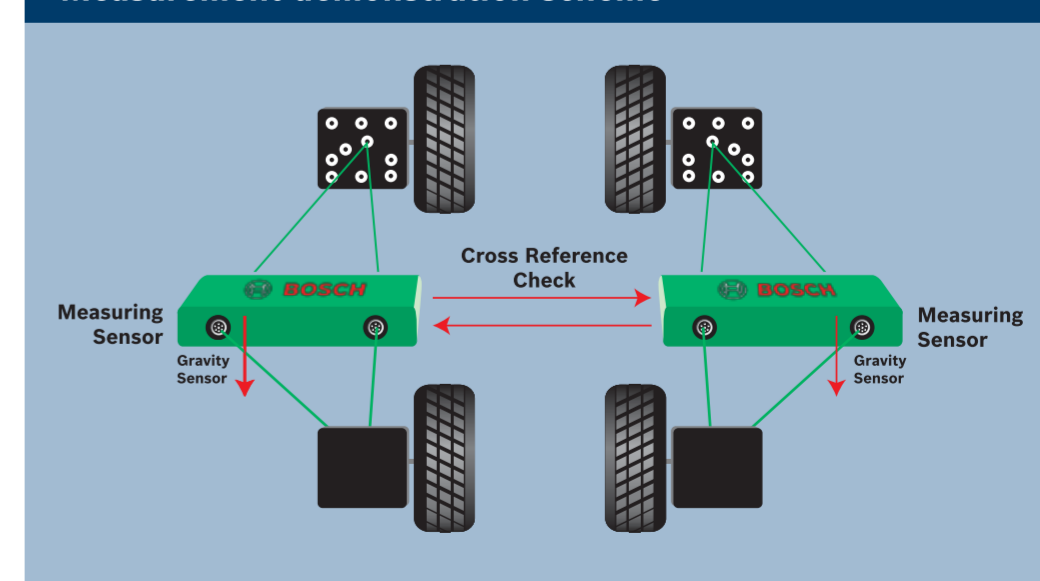

High-frequency capture

Internal Reference Measurement

Measuring sensors with an integrated reference system, as well as pendulums to determine the center of gravity, allow for the position of the sensors to be immediately located for instant measurement.

Measurement demonstration scheme

SIM wheel alignment product number: FWA 4630
